FlexxiIT

Resumen del proyecto

FlexxiIT is an innovative platform designed to provide customized digital services for entrepreneurs. Our offer includes the creation of virtual stores (**ecommerce**), **appointment booking systems** specially oriented to beauty businesses, and a customized service for the development of websites according to the specific needs of our clients. Currently, I am playing the role of **Frontend Developer** in the **Angular** framework, while a colleague from the university is in charge of the backend. Together we have developed the **landing page** and we are in the process of implementing the ecommerce module.

Key functions and features

- **Ecommerce:** Allows entrepreneurs to manage their online stores with ease. The stores are customizable in terms of colors and basic design to adapt to the brand identity.
- **Appointment Booking System:** Ideal for beauty salons, spas and other service businesses, facilitating the management of appointments and reservations.
- **Customized Service:** We offer the development of customized web pages, meeting the unique specifications of each client.

Development process

At FlexxiIT, we use agile methodologies, specifically **Scrum**, to organize our work in sprints managed through **JIRA**. For version control and branch management, we use **GitHub**, which allows us to maintain an orderly and collaborative workflow.
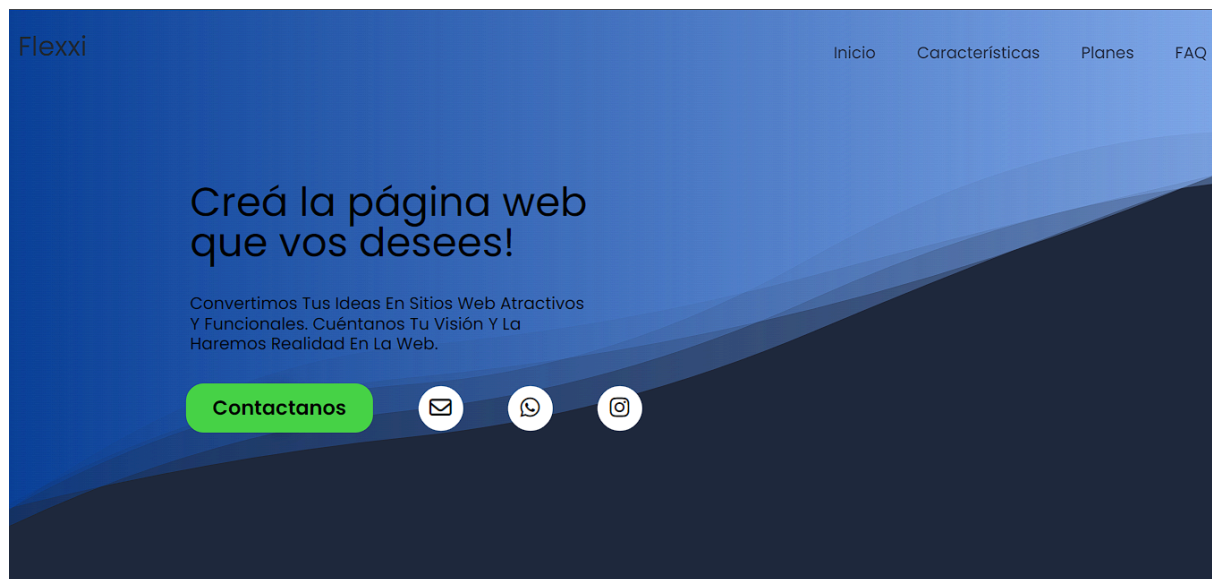

Challenges and solutions

- **Challenge:** Integrate diverse services into a single cohesive platform.
- **Solution:** We have adopted a modular development approach, ensuring that each component can be developed and tested independently before being integrated into the main platform.
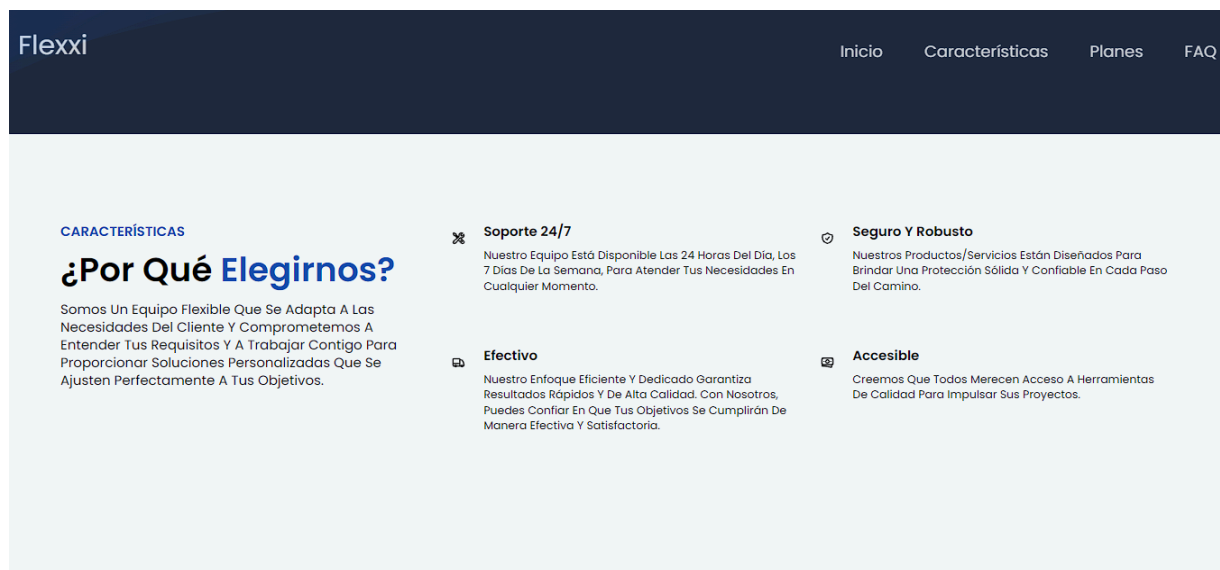

Expected results

We expect FlexxiIT to become an essential tool for entrepreneurs, facilitating the digitization of their business and enhancing their online presence. Key benefits include increased visibility, better customer management and the ability to customize their digital presence according to their needs.
